

Banana Covers

Crop covers, made of non-woven polypropylene material, are used in agriculture for the purpose of protecting the crops from both biotic and abiotic stresses. Use of crop cover in open fields leads to faster and healthy plant growth, reduced usage of agrochemicals, prolonged harvesting, better fruit quality and opportunity to grow crops during off-season also.

Features:

- Protects a banana from extreme heat and cold
- Prevents scorching of banana
- Saves cost by minimizing the usage of pesticides
- Clean banana of uniform size and colour
- 3-4 kg extra production per bunch
- More uniform fingers (less gap between upper and lower fingers)
- Protects from fruit flies and other harmful insects
- Protects from animals and birds
- Facilitates the production of export quality banana fetching a good market price.

Agriplast Banana Shield has applied one all the fingers from the banana flowers have emerged.

Make a preventive spray on the fruits and then remove the extra flower a bunch from below the fruit bunch

Cut the appropriate length of the banana shield from the roll

Tie it on the top as shown in the picture.
